

ERICK ANANGWE

Allendale, MI | erickanangwe23@gmail.com | 616-334-8306 | www.linkedin.com/in/erickanangwe

EDUCATION

MS Artificial Intelligence, Grand Valley State University, Grand Rapids, MI
MS Data Science and Analytics, Grand Valley State University, Grand Rapids, MI
GPA – 4.0
BS Economics, University of Nairobi, Nairobi, Kenya
GPA – 3.7

Apr 2027

Dec 2025

Dec 2020

SKILLS

- AI (LangChain, LangGraph, LangSmith agent observability, Ollama, OpenAI, MCP, Azure AI Search, Azure AI Foundry, Azure Application Insights, Claude Code,)
- Data analysis with Python, R, SAS
- Data Visualization: Excel, Tableau, Vega Lite, D3.js
- Machine learning operations with DVC, MLflow, Docker, GitHub Actions, Kubernetes, Prometheus, Grafana
- Prompt engineering skills
- Agentic AI with LangChain, MCP servers, LLM APIs, Claude code, Azure AI Foundry
- Cloud Applications development with Google Cloud Platform, Microsoft Azure App services
- Databases (PostgreSQL, Neo4J, MySQL, MongoDB)
- Cultural intelligence
- Great interpersonal skills
- Teamwork and collaboration skills
- Excellent communicator

WORK EXPERIENCE

AI DevOps Intern, Grand Valley State University, IT Innovation and Research, MI **May 2025 – Present**

- Designed and developed an end-to-end AI-powered financial literacy chatbot for college students, leveraging Azure AI Search, Azure App Services, Azure OpenAI, Azure AI Foundry Tracing, and OpenAI's GPT models to deliver a financial literacy learning management system assistant with an agentic RAG system.
- Created Implemented tracing for the chatbot on Azure AI Foundry Tracing with Application Insights and OpenTelemetry SDK with spans of all the steps the user input goes through for an answer to be generated by the agentic RAG system.
- Implemented FERPA guardrails for the chatbot to ensure that users don't expose their private data to the chatbot using Presidio PII Scan, LLM as a judge, and manual guardrails using a confidence score in multi-step guardrail system.
- Optimized for accessibility, cross-device compatibility, and error handling, incorporating theme toggles, keyboard navigation, robust state management, and API guardrails, resulting in a highly reliable and inclusive chatbot solution.
- Collaborated closely with graphic designers, community ambassadors, backend developers, frontend developers, and finance script writers to architect a scalable, user-centered financial literacy learning management system for college students.

Graduate Assistant, Grand Valley State University, International admissions and Recruitment, MI **Sep 2025 –Present**

- Respond to 80–100 daily inquiries in the International Admissions Slate inbox and WhatsApp, addressing diverse undergraduate and graduate application, admission, and immigration-related questions from international applicants
- Guide prospective international students through the full admissions and visa process, ensuring accuracy and compliance with U.S. immigration policies and institutional requirements
- Create and deliver engaging PowerPoint presentations for international recruitment webinars and F-1 visa mock interview sessions to enhance global applicant engagement and conversion rates
- Organize and facilitate virtual mock visa interviews, improving international students' preparedness and visa approval outcomes, directly contributing to increased recruitment yield
- Communicate program-specific admission requirements, financial documentation guidelines, and immigration updates across a culturally diverse applicant pool from over 20 countries, maintaining professionalism and clarity
- Maintain an in-depth understanding of GVSU's academic programs, scholarships, and student resources to provide exceptional customer service and accurate advising to prospective students

Teaching Assistant, Grand Valley State University College of Computing, MI

Jan 2025 – Apr 2025

- Worked as a teaching assistant for an information visualization class where Tableau, Vega Lite and [D3.js](#) were being used as the main data visualization tools for assignments and labs
- Provided efficient support to my professor through taking up office hours to assist students with information visualization queries and timely grading of graduate student assignments, projects and lab work
- Ensured students followed standard operating procedures in their lab assignments by making the rubrics accessible and understandable by all students
- Worked in my professor's Innovative AI and Data Science Research Lab as a research assistant to develop a convolutional neural network of spatial-temporal crime data and explain the inner workings of the model through interactive visualizations

Graduate Assistant, Grand Valley State University College of Computing, MI

May 2024 – Apr 2025

- Worked with the International Student Engagement Coordinator in brainstorming ways to support international students and increase engagement amongst the students, the rest of the campus community and the off-campus community
- Analyzed student data to understand the various demographics of our students and tailored support to their needs
- Successfully organized various college-wide events in collaboration with other university departments and resources, aimed at creating networking, engagement and professional development opportunities for students
- Mobilized international students in the College of Computing to attend both on-campus and off-campus events and encouraged them to get out of their comfort zones and network, leading to an impressive increase in networking events attendance from the university's international student population

Resident Assistant, Grand Valley State University Housing and Residence Life, MI

August 2024 – Present

- Mediated and resolved conflicts among 60+ residents, practicing impartiality, active listening, and collaborative problem-solving to strengthen community trust and communication
- Planned and executed 5+ community building programs per semester, managing logistics, budgeting, marketing, and post-event evaluations that increased resident engagement
- Responded to multiple crisis incidents per semester, ensuring resident safety, completing accurate documentation, and connecting individuals to campus support resources
- Cultivated an inclusive community for 60+ residents, designing intentional initiatives that promoted belonging and intercultural understanding across diverse backgrounds
- Completed 100% of administrative tasks (incident reports, duty logs, program evaluations) within required timelines, maintaining compliance and data accuracy
- Led and mentored 60+ students, fostering academic success, emotional well-being, and personal growth through one-on-one meetings and group interactions
- Balanced Resident Assistant commitment alongside full-time graduate coursework and a graduate assistantship, demonstrating strong time management, self-leadership and prioritization skills
- Collaborated with a 10-member Resident Assistants staff team to implement community-wide events and initiatives that enhanced resident engagement and wellbeing

ML Engineer/Data Analyst, Cloudfactory Kenya Ltd, Nairobi, Kenya

Aug 2020 – Aug 2023

- Validated and curated large-scale supply chain relationship graphs representing millions of global company dependencies across supplier, customer, OEM, SaaS, PaaS, parent, and subsidiary linkages
- Performed high-precision entity resolution and relationship verification, correcting automated extraction errors and improving graph accuracy, integrity, and reliability for downstream ML models
- Labeled and annotated real-world supply chain disruption events (cyber incidents, geopolitical restrictions, natural disasters, sanctions, bankruptcies) to create high-quality supervised training datasets
- Conducted human-in-the-loop model validation, reviewing ML-generated risk scores, dependency paths, and disruption propagation predictions, and feeding structured feedback into model retraining pipelines
- Designed and applied domain-driven quality control heuristics to improve relationship classification accuracy, false-positive reduction, and edge confidence scoring
- Executed error analysis on graph ML and NLP pipelines, identifying systematic failure modes and recommending corrective labeling strategies
- Evaluated and validated counterfactual disruption simulations, ensuring realistic propagation behavior across multi-tier supplier networks
